

CALL FOR STAKEHOLDERS WORKSHOP: *SEAWEED AQUACULTURE IN NORWAY: SOCIO-ENVIRONMENTAL BENEFITS AND POLICY FRAMEWORKS*

THE CHALLENGE

Seaweed aquaculture is a recent and exciting newcomer in Norwegian waters.

Seaweed aquaculture provide diverse benefits for industry, the environment and society. Characterisation and recognition of such benefits may thus serve to generate public acceptance and support.

Additionally, seaweed aquaculture emerges within a policy and regulation framework for managing seaweed production. Do they support or constrain development? How can they be improved to further promote sustainable growth?

OBJECTIVES OF THE WORKSHOP:

This workshop brings producers, managers and scientists together to address these issues. This joint one-day workshop aims to make best use of participants' time and foster exchange between the various stakeholder groups.

The participants will be invited to contribute their **viewpoints** and **perceptions**, leading to better understanding of perceptions on policy and management frameworks in an open discussion.

WORKSHOP DETAILS

WHO IS INVITED: Stakeholders interested in and affected by seaweed aquaculture willing to provide their vision and opinion.

DATE: 25 February 2020

SCHEDULE:

Registration: 09:30
